Cart2Quote for Magento 2

(Including Software Download Instructions)

About the Extension

Cart2Quote - Developed to create, send and receive quotation requests through both the Magento front and back-end. Choose to add a 'request quote' button to specific Magento catalog items, to store(vIEWS), or to specific customer groups. This module enables you the functionality to negotiate custom terms and pricing with your clients. Cart2Quote is an ideal tool for merchants selling Made to Order products, customizable goods, and also for those who simply do not wish to publicize specific product prices.

We recommend these modules to store owners who wish to further enhance their stores' B2B functionalities. These modules work seamlessly and are designed to offer excellence in combination with Cart2Quote.

Not2Order - offers you full product price and product specific button flexibility.
